1st December 2015

Dr Sam Dorn
President
International Federation of Endodontic Associations

Dear Dr Dorn,

Re: **IFEA - Jean-Marie Laurichesse Research Award - Summary**

We are pleased to inform you that the research project entitled: **“Influence of access cavity designs, canal preparation taper, irrigation and intracanal medicaments on fracture susceptibility of endodontically-treated teeth”** has been completed. One of the experiments was cancelled due to shortage of samples and thus the project title has been modified accordingly to **“Influence of access cavity designs, root canal enlargement and short-term calcium hydroxide intracanal medicament on fracture susceptibility of root-filled teeth”**. A summary of the research project in a form that suitable for publication is attached.

We would like to take this opportunity to thank the International Federation of Endodontic Associations for providing **“IFEA Jean-Marie Laurichesse research grant award for 2010”** that contributed in funding this research project.

With kind regards,

Yours sincerely,

Rada Haddadin

Prof. Paul Abbott (Supervisor)
